

If your PCA looks weird
and it don't look good,
Who you gonna call?
t-SNE!

A Brief Introduction to
Dimensionality Reduction with t-SNE

Don Perkus
4/26/17

PCA – Dimensionality Reduction

- How it works
 - Projecting on to best hyper-plane
 - Minimize distances of far separated points
- Limitations
 - Linear algorithm, so it can't interpret complex non-linear relationships between features.
 - Focus on placing dissimilar data points far apart in a lower dimension representation.

t-SNE

- t-Distributed Stochastic Neighbor Embedding
- Often it is important that similar data points be represented close together.
- t-SNE is based on probability distributions with gradient descent on neighborhood graphs to find the structure within the data.

Example: handwritten digits dataset

A selection from the 64-dimensional digits dataset

0	1	2	3	4	5	0	1	2	3	4	5	0	1	2	3	4	5	0	5
5	5	0	4	1	3	5	1	0	0	2	2	2	0	1	2	3	3	3	3
4	4	1	5	0	5	2	2	0	0	1	3	2	1	4	3	1	3	1	4
3	1	4	0	5	3	1	5	4	4	2	2	2	5	5	4	4	0	0	1
2	3	4	5	0	1	2	3	4	5	0	1	2	3	4	5	0	5	5	5
0	4	1	3	5	1	0	0	2	2	2	0	1	2	3	3	3	4	4	
1	5	0	5	2	2	0	0	1	3	2	1	3	1	3	4	4	3	1	4
0	5	3	1	5	4	4	2	2	2	5	5	4	4	0	0	1	2	3	4
5	0	1	2	3	4	5	0	1	2	3	4	5	0	5	5	5	0	4	1
3	5	1	0	0	2	2	2	0	1	2	3	3	3	3	4	4	1	5	0
5	2	2	0	0	1	3	2	1	4	3	1	3	1	4	3	1	4	0	5
3	1	5	4	4	2	2	2	5	5	4	4	0	3	0	1	2	3	4	5
0	1	2	3	4	5	0	1	2	3	4	5	0	5	5	5	0	4	1	3
5	1	0	0	2	2	2	0	1	2	3	3	3	3	4	4	1	5	0	5
2	2	0	0	1	3	2	1	4	3	1	3	1	4	3	1	4	0	5	3
1	5	4	4	2	2	2	5	5	4	4	0	0	1	2	3	4	5	0	1
2	3	4	5	0	1	2	3	4	5	0	5	5	5	0	4	1	3	5	1
0	0	2	2	2	0	1	2	3	3	3	3	4	4	1	5	0	5	2	2
0	0	1	3	2	1	4	3	1	3	1	4	3	1	4	0	5	3	1	5
4	4	2	2	2	5	5	4	4	0	0	1	2	3	4	5	0	1	2	3

t-SNE Algorithm

- Calculate the conditional probability of similarity between each pair of points in
 - High dimensional space
 - Low dimensional space
- Compute a cost function
 - Close neighbors should stay close
 - Middle and far neighbors may vary
 - “Normalized” by local density
- Gradient Descent

Map points – initially not so good

Map points - better

Preserve the neighborhood

Measure Pairwise Similarities

Create a Similarity Matrix

Measure pairwise similarities between high-dimensional and low-dimensional objects

Create a Similarity Matrix

Conditional Probabilities

Stochastic Neighbor Embedding (SNE) converts the high-dimensional Euclidean distances between data points into conditional probabilities that represent similarities (using t-Student distribution). Then do it for low-dim.

Create a Similarity Matrix

Then make it better!

Stochastic Neighbor Embedding (SNE) converts the high-dimensional Euclidean distances between data points into conditional probabilities that represent similarities (using t-Student distribution). Then do it for low-dim.

SNE's cost function focuses on retaining the local structure of the data

Minimize the cost function by Gradient Descent

Demo

- How to Use t-SNE Effectively
<http://distill.pub/2016/misread-tsne/>
 - 1a. Perplexity (5 to 50 is usually best)
 - 1b. Number of Iterations
 - 2. Cluster Size
 - t-SNE's measure of “distance” varies by local density
 - As a result, it naturally expands dense clusters, and contracts sparse ones, evening out cluster sizes.
 - 3. Cluster Distance
 - 5b. Shapes (2 bars)

Demo (continued)

- Square Grid
 - More points
 - Low perplexity
 - Very high perplexity
- Two Clusters, equal size
 - Very low perplexity => worms
